PREMIUM AGM BATTERIES ENGINEERED FOR PROVEN PERFORMANCE

WE DEMAND MORE FROM OUR VEHICLES.

Today's vehicles need a battery that keeps up with electrical loads. In the past two decades, the number of electrical devices in vehicles has significantly increased. Nowadays, there are over 150 components drawing power from the battery. These include entertainment and GPS navigation systems, heating and cooling systems, reverse cameras, parking sensors, power windows and doors, sunroofs, and start-stop technology. Consequently, the electrical demand on AGM batteries has substantially risen due to these advancements.

The inclusion of each supplementary electronic component results in increased power draw, leading to a higher number of discharge and recharge cycles. This repetitive cycle activity ultimately diminishes the lifespan of conventional batteries.

ACDelco Absorbent Glass Mat (AGM) batteries are precision engineered to offer the ultimate combination of reliability, durability and safety, even under the most demanding applications.

ACDELCO AGM BATTERIES CAN HANDLE ALL THE ELECTRICAL DEMANDS IN TODAY'S VEHICLES.

FEATURES & BENEFITS

Superior electrical performance

- Charges faster than standard batteries
- Handles high electrical demand
- Meets the electrical demands of Start Stop vehicles

Non-spillable

- Will not leak during transportation or installation
- Provides safest solution available

Temperature tested

- Resists internal corrosion from heat to extend battery life
- Delivers better starting power in cold weather

Vibration resistant

- Resists deterioration from poor road conditions
- Delivers consistent performance in harsh conditions

PREMIUM AGM BATTERIES ENGINEERED FOR PROVEN PERFORMANCE

ACDELCO AGM BENEFITS

Designed for Repetitive Cycling

Ability to recharge quickly after powering vehicle electronics.

Extended Life

Long-lasting performance even under demanding conditions.

FULL FRAME Grids

Both positive and negative grids minimize corrosion for longer battery life and provide optimized electrical conductivity.

Excellent Starting Power

Engine will start even at low temperatures and low state of battery charge.

Maintenance Free

No need to add water or electrolyte to maintain performance.

Non-Spillable

Electrolyte held permanently in glass mat separator.

DUAL-SEALED VALVE

Create a maintenance-free environment, ensuring water regulation remains consistent even under high temperatures.

FULL FRAME GRIDS

Patented grid manufacturing process produces a strong, efficient grid for high performance.

PROPRIETARY NEGATIVE PASTE

Enhances charge acceptance capabilities

HIGH DENSITY POSITIVE PASTE

Improves cycling performance for high accessory applications.

AGM SEPARATOR

Glass mat separators effectively immobilise electrolyte to ensure stable cycle performance

BATTERY CASE

Rugged reinforced polypropylene holds the plates under compression even in high-vibration applications.
